# The Problem

Smart devices are constantly collecting data. Everything we do, see and listen is collected, stored, analyzed and sometimes shared. Unfortunately, even though this data belongs to us, it is not ours. It is the property of the businesses that collect it with our consent...

Despite some progresses in privacy regulation regarding collecting and analysing personal data (such as the General Data Protection Regulation (GDPR), our data is still controlled by the companies. To change the *status quo* we need privacy-preserving mechanisms that empower users with control over their data. This our primary goal and the reason why this project exists.

# The COP-MODE Project

COP-MODE (COntext-aware Privacy protection for MObile DEvices) is a research project of the University of Coimbra, University of Porto, University of Cambridge and INESC TEC aiming at enhancing the privacy of mobile devices. This project is funded through the European Union's Horizon 2020 research and innovation programme under the NGI_TRUST grant agreement no 825618.

"The NGI_Trust project aims to support the development of a human-centric Internet. by developing a stronger European ecosystem of researchers, innovators and technology developers in the field of privacy and trust enhancing technologies".
The Next Generation Internet (NGI) initiative by the Digital Single Market of the European Commission.
